Beauty by **your standards** – designed to shape your vision

You enjoy the many different facets of life and the freedom to decide who you want to be and how you want to look. Whether fashion or lifestyle, business, or leisure: you go your own way and consciously choose what you love and what suits you. Why should you follow pre-set beauty standards? Why should you let age define your appearance? Beauty is individuality and confidence at its best. According to standards that you set for yourself. **It's your life. It's your definition of beauty.**

Find out what's in it for you

The **premium hyaluronic acid fillers** of the **BELOTERO® COLLECTION** were developed to meet the highest demands for personalized beautification.¹⁻⁷ A comprehensive collection that allows aesthetic experts to set up customized treatment plans¹⁻⁷ to realize your individual wishes in a natural-looking way.⁸ Discover what the **BELOTERO® COLLECTION** can do for you.

Why **hyaluronic acid** is key to a youthful appearance

What makes hyaluronic acid (HA) so valuable is its ability to bind large amounts of water and act as a **natural moisturizer**.^{8,9} The body can create HA itself,¹¹ however, natural production declines over the years. As a result, the skin becomes drier and loses elasticity, wrinkles appear and facial contours fade.⁸

Meanwhile, aesthetic medicine has developed **highly effective solutions to improve the appearance of skin** with HA. Advanced HA fillers allow a wide range of applications: from wrinkle and lip correction to lifting and glow treatments.¹²

Not all hyaluronic acid fillers are created equal

Made in Switzerland, our premium collection of hyaluronic acid fillers is intentionally designed to meet patients' individual desires while respecting their natural features and facial expressions.^{8,13,15} Whether you want to improve skin glow, correct lines and wrinkles, tone and firm skin, or optimize the appearance of your lips, the **BELOTERO® COLLECTION** can deliver harmonious results that last over time*.^{1-7,14,15} Studies prove high patient satisfaction and a well-established safety profile.^{1-7,8,16-20}

*Duration ranges from 4 months and is seen up to 18 months in many patients.
